## Cushitic numerals

*Dedicated to the memory of Andrzej Zaborski (1942–2014)*

### Abstract

More than 30 years ago Andrzej Zaborski (1983; 1987 {1983}) collected and analyzed all Cushitic and Omotic numerals, which were described in his time, and tried to analyze their internal structure. His two pioneering studies stimulated the present attempt to collect all available relevant data about Cushitic numerals and to analyze them in both genetic (Afroasiatic) and areal (Omotic, Ethio-Semitic and Nilo-Saharan) perspectives, all at the contemporary level of our knowledge. With respect to the long mutual interference between various groups of Cushitic and Omotic languages, it is necessary to study the numerals in both the language families together. The presented material is organized in agreement with the genetic classification of these languages. On the basis of concrete forms in individual languages the protoforms in partial groups are reconstructed, if it is possible, and these partial protoforms of numerals in the daughter protolanguages are finally compared to determine the inherited forms. The common cognates are finally compared with parallels in other Afroasiatic branches, if they exist, or with counterparts in Ethio-Semitic or Nilo-Saharan languages, if they could be borrowed from or adapted into the Cushitic or Omotic languages.

### Keywords

Cushitic, Omotic, Ethio-Semitic, Afroasiatic, Nilo-Saharan, etymology, borrowing.

### I. North Cushitic = Beja

### Set of cognates between the Cushitic numerals in Afroasiatic context

#### “one”

1.1. Beja \*gaaL “1”, \*?*asa-gwiL* “6” = \*“growing 1” || ECush.: Arbore *gʷalaata* “other” (KS), besides Dullay \*gollan- “9” = \*[10] minus 1”; further ECush. \*sagal(an)- “9” || SCush.: Iraqwoid \*gwaleeli, K'wadza gweli “9” = \* “[10] minus 1”. Cf. NOM.: Zayse (Cerulli) *gillo* “alone”, and / or Zayse (Cerulli) *gillaa* “finger” || Ari *gil'a* “finger” (Lamberti 1988, 52) ||| ECush.: Afar-Saho (Reinisch) *giili* “thumb”.

1.2. Agaw \*la-y<sup>w</sup> m., \*la-ti f. “1” reflect the gender distinctions indicated by \*-ku & \*-ti respectively. The first component \*la- may be related to Khamir (Reinisch) *illaa*, *ellaa*, *iellaa* “only, alone, solitude”, Xamtanga (Appleyard) -llá “alone” and perhaps Awngi (Reinisch) *eliwii* m., *eliti* f., (Appleyard) *əllíw* “other” and Burunge (SCush./Iraqwoid) (é)lén “1”. The loss of the first syllable can be caused by influence of the following numeral \*läya “2”. Perhaps the same root appears in ECush. \*(?/ha)lih- “6” and SCush. \*lahooʔu “6”. But cf. also NS: Kunama *ella*, Ilit *ella* “1” (Bender) ||| CSud.: Balese-Obi *eli*, Moru *ālo* etc. “1” ||| Maban: Maba *illek*, pl. *illi* “that one”.

- 1.3. ECush. *\*mat-/mit-* “1”, plus Oromo *mat-ummanu* “totally” ||| NOm.: Kafa (Cerulli) *mittoo* “sole”; Bench *mat*<sup>3</sup>, She *mātā* “1”. Further cf. CChad.: Mefelete (Colombel) *məətā* “1” ||| ?WChad.: Sura *mundo*, *mindon* “1” < \**mVntV* < \**mVtnV*? Cf. also NS: Gumuz: *Sai metam*, Sese *metá*, Gojjam *metaa(m)*, *mítal*, Kokit *meta* “1”.
- 1.4. ECush. *\*kaww-* “1” || Beja (Roper) *kwo* “unit” || Agaw: Qwara *kaw-*, *qaw-*, Khamir *qaw-* “to be in front of, be first” (Reinisch), Falaša *kawinto* “first” ||| ?NOm.: Dizoid *\*koy-* “1”. The following forms of pronominal origin are maybe related: Eg. *kjj*, pl. *kwj* “another” ||| Chad.: (West) Hausa *kowa* “every one, any one” || (Central) Margi *kú* “this one”.
- 1.5. ECush. *\*tak-ku* or *\*kaw* m., *\*tak-ti* or *\*-tay* f. “1”, Dullay *\*tabbi[n]* < *\*tak-xubin-* “1+5”, perhaps also Qwadza (SCush.) *típa* “6”; Agaw *\*cəka* “10” < *\*təka-täŋən* “1 x 10” (see §10.2) ||| NOm.: Kafa (Cerulli) *tokki/tok* “together with” ||| Chad.: (West) Hausa *daya tak* “only one” || (Central) Daba *təkən*, Wandala *mtáákwé*, Zeghwana *tekwé*, Muktele *tékwólá*, Mofu *ték*, Gidar *taka*, Logone *tekkuu* etc. “1”. Also NS: Nera (Reinisch) *toko/doko*; Fur (Meinhof) *tɔk*; Maba (Barth) *tek*, Kodoi *tek*; WNil.: Dinka (*a*)*tok* “1”.
- 1.6. ECush. *\*hal-* “1” || Dahalo *holló* “and, with” || Iraqw *halahali* “sixth finger”; Ma'a *hálí* “other” (Ehret 1980, 306). The same root, maybe, formed the numeral “6”: ECush. *\*(ʔ/hi)laḥ-/* *\*(ʔ/ha)liḥ-* “6” and SCush. *\*lahoo?* “6” (cf. §1.2.).
- 1.7. ECush.: Afar-Saho *?iniki* “1” is connected with (or borrowed from) Agaw: Bilin, Khamir *inkii* “all, each, unity”. Interesting is Burji (Conti Rossini) *do'inki* “1”.
- 1.8. Dahalo *vattíkʷe* m., *vattékʷe* f. “1” is connected with *vaatte* “other” and Asa *wataka* “all”. Any relation to Yaaku *weheto* “1” is dark (for Zaborski the Yaaku numeral “1” is an adaptation of Arabic *wāḥid*).
- 1.9. Iraqwoid *\*wakV* “1”, in Burunge “other”, and Ma'a *wé* “1” resemble Karekare (WChad.) *wáiké* “each, all” and may be of pronominal origin. Alternatively, it is thinkable to connect them with Egyptian *wf(j)-w/-t* “1”, vocalized *\*wiʃyaw* m. / *\*wiʃi.t* f. (Vycichl) or *\*wúʃ(j)uw* m. / *\*wúʃju(w)t* f. (Loprieno).

## “two”

- 2.1. Agaw *\*läya* / *laja* || ECush. *\*lamma(y)* || Dahalo *líima* || Asa *hlam* “2”, with parallel counterparts in Omotic: Ometo *\*lamʔa*; Gimira *\*nam*; Mao *\*numbo*; cf. Bambassi *kú-lùmbò* ‘7’; Aroid *\*lamma* “2”, represent the best preserved numeral common for both Cushitic and Omotic. There is a promising internal Cushitic etymology: (East) Oromo *elema* “index-finger” (da Thiene: “dito indice”) || Agaw: Damot *layeti* “thumb” || Beja *lumi* “thumb”. The semantic difference could be caused by the habit to name the numbers according to spans, here concretely “thumb – index-finger”. But there are several remaining questions: (i) Does Muussiye (Konsoïd/ECush.) *taammu* “2” belong here? If it is the case, it implies the initial *\*tl-*, perhaps compatible with Asa *hl-*. This unique example may be supported by Dullay *\*tahhan* ~ *\*tamman* “7”, if it reflects *\*tamhan* < *\*tlam-han-* “2+5”? (ii) Does Afar-Saho *\*mal(V)-hVn-* “7” represent the same compound with metathesis of the first component *\*mal(V)* < *\*lamma(y)* “2”? (iii) Similarly, an analogous metathesis could be realized in Beja Arteiga (Hudson) *mhaloo-* “2”, cf. *málho* “Zweiheit, zwischen” (Reinisch), while the unmetathesized form might be preserved in *?asa-ramaa* “7” (but Reinisch 1894, 9 derived the second component from the Beja verb *raam-* “to follow”, similarly as Latin *secundus* from *sequor*). On the other hand, the sequence *m...l* is also more widely attested: Qwadza *meliko* “8”, Asa *milek* “day after tomorrow”, Iraqw *male*, *maleʔale* “again” (Ehret 1980, 343).
- 2.2. Iraqwoid *\*tsada* “2” looks as isolated within Cushitic, perhaps with exception of two no less isolated ECush. forms, namely Yaaku *çε* “2” and Arbore (Conti Rossini) *sada* “2”. Related may be the most wide-spread Chadic form for the numeral “2”, reconstructible as *\*ciru*.

**“three”**

3.1. Beja *\*mhay* “3” is compatible with Egyptian *ḥm̥t(w)* m., *ḥm̥tt* f. “3”, vocalized as *\*ḥam̥taw* & *\*ḥam̥tat* (Vycichl) or *\*ḥám̥t w* & *\*ḥám̥t t* (Schenkel), besides *ḥmnw* m., *ḥm̥nt* f. “8”, vocalized as *\*ḥam̥naw*, *ūnaw* (Loprieno), and perhaps Guanche of Tenerife *amiat*, *amiet* “3”, *amiago* “30”, if the Beja numeral originated from a metathetical form *\*hmay* (details see Blažek 1999b, 229–30, 234–35). If the cluster *\*mh-* was original in Beja, it would be tempting to speculate about connection with Yaaku *xaat* “3” and Ma’*a xai* “3”, where the initial cluster would be simplified, or, in the case of its prefixal origin in Beja, *m-* did not appear at all.

3.2. Agaw *\*säyʷa* / *\*säyʷa* “3” and *\*säyʷä-tta* “8”, originally “3 plus”, stand isolated within Cushitic and Afroasiatic at all. Perhaps a NS source is thinkable, although not from historical neighbors, e.g. p-Kanuri *\*asuku* “3” and *\*wusuku* “8” (Blažek 1999, 5, 8) or p-Nubian *\*tɔssik* “3” (Blažek 1999, 17), if the first syllable was reduced into *\*tsik*.

3.3. ECush. *\*šazh-/šizh-/saz(z)ih-* “3” (Sasse 1976, 138) and *\*šiz[h]ent-* “8” < *\*šizh-* “3” + *(\*po)mut-* “5” correspond maybe with Mao (NOm.) *(\*t)siyaz-* “3”, if it is not an ECush. loan. In Semitic, there is a promising cognate in the Akkadian length-unit *šizum*, *šizū* “Dritt-Elle” < *\*šiHz/d-* or *\*siz/dH-*, and maybe also *\*šid-* “6”, derivable from *\*šid-šid-* “3+3” (cf. Ugaritic *tllt w tllt* “6” = “3 + 3”) or from *\*šid-ṭin-* “3x2” (Blažek 2001, 23).

3.4. Dahalo *kaba* (Tosco) = *kāba* (Ehret) “3” is perhaps connected with ECush. *\*kub-* “finger” (Sasse 1982, 128–29) and WChad. *\*kUban-* “finger, fingernail” (Stolbova 1987, 211), cf. a use of this form in Sumray (EChad.) *kubi* “6” and *dénaa gíbii* “8” (Lukas).

3.5. Iraqwoid & Qwadza *\*tami* “3” is probably related to Dahalo *ʔittaantóoni* “3rd day after tomorrow” (Ehret 1980, 290). It is tempting to add Muussiye (Konsoid/ECush.) *taammu* “2”, but the semantic difference is surmountable only in the case of original finger-names and various strategies of counting on fingers, e.g. if this numeral was based on the middle-finger, counting from the thumb leads to “3”, but counting from the “index-finger” indicates “2”.

**“four”**

4.1. Beja *fadig* “4”, with regard to older records as *phadéggä* (Seetzen), *faddeg* (Kremer), *fardik* (Krockow) and Beni Amer *farig* (Reinisch), is derivable from *\*fardiga* or *\*fardiga*, where *-g(a)* is the plural ending (Roper 1928, 183). Only the starting-point with *\*-r-* is compatible with ECush. *\*afur-* / *\*affar-* < *\*afwar-* “4”, without *\*a-* Afar *fareyi* ||| Om. *\*awurd-* “4” ||| Chadic *\*firadu* or *\*faridu* “4” ||| Egyptian *fd-w/-t* “4”, *ifd.t* “Vierheit”, Coptic f. Φτοε < *\*fd\*ww.t* < *\*fd\*3w.t* (Vycichl 1940, 83) < *\*fida3wat* < *\*fidarwat* (Blažek 1999, 32–33). Etymology may be sought in Somaloid (ECush.) *\*far-* “finger” (Lamberti 1986, 244, 362): fingers of one hand (without thumb) = four fingers.

4.2. Agaw *\*säʒ(ʒ)a* “4” (Appleyard) probably originated from *\*sägya* (cf. Reinisch 1887, 298: von alten Leuten und Weibern noch öfters *sägyā*, *säqyā* gesprochen; Munzinger had recorded *segia* “4”). The corresponding archaized form *\*säxyata* of the numeral “9” was borrowed into Ethio-Semitic: Harari *zəħtāñ*, Argobba *zāħtāñ*, Amhara *zātāñ* “9” which were a source of borrowing for this numeral in Ḍirayta (Konsoid/ECush.) *tsinqoota* and Zayse (Ometo/NOm.) *tsingō*. The more archaic Agaw protoform *\*sägya* “4” is compatible with Iraqwoid *\*tsigaha* “4”.

4.3. ECush. *\*šalah-* “4” is compatible with Dahalo *saʃála* “4” via metathesis of the liquid and laryngeal in one of these two forms. Yaaku *çwen* (Heine) = *shuen* (Hobley) “4” may be related, although *n* instead of expected *l* is unclear. On the other hand, there is an attractive NS parallel in Nera *šoona* “4”. The NS parallels also exist to ECush. *\*šalah-* & Dahalo *saʃála* “4”, namely in Kunama *salle* “4” and Mabang *asali*, Kodoi *asal*, Maba *asaal* “4”.

**“five”**

5.1. Agaw \**?ankʷa* || ECush. \**kani*/\**koni* || SCush.: Iraqwoid \**kooiani*, Qwadza *koðana*; Ma’ā *kooi* “5” are derivable from a common protoform \**kʷani*. In the numerals “6”, “7” maybe appears in the form \**hVn-* or only \**-h-*, if it is not a continuant of the Dullay-Yaaku isogloss \**xubin*. It seems, within Cushitic and AA there are no cognates or relatives of \**kʷani* (the isolated form as WChad./SBauchi: Guruntum *kyoon* “5” cannot be taken in account). On the other hand, the NS counterparts are more promising: Ilit *kona*, Kunama *koona* “hand” vs. *kussuume* “5”; Nilotic: (West) Lango *kañ* “5” vs. Dinka *kon* “arm”; (East) Teso -*káni*, Turkana *ya-káni*, Karimojong -*qan*, Bari (*mo-*)*kánat* etc. “5” vs. \**-k₃am-* “arm, hand”.

5.2. Dullay \**xubin* “5” and Yaaku *xoopi* “5” are probably connected with ECush. \**hub[i]n-* > Somali *ħubin* “limb”, Oromo *humnaa* “muscle, power”, Konso *hupna* “power, strength, energy” (Sasse 1979, 15) and further with Semitic \**hupn-/hapn-* “hollow of the hand, handful, fist” (SED I, 113–14, #125).

5.3. HECush. \**?omute* “5” and Asa *mut* “5” are probably of NS origin, cf. South Nilotic \**mu:t* “5” (Rottland 1982, 304); East Nilotic \**-miet-* “5” (Vossen 1982, 367) and North Koma *miit* “hand” (Bender).

5.4. Dahalo *dáwàt̪e* “5” is probably contracted from \**daba-watte* “hand x 1”, cf. Dahalo *dába* “hand” & *vattúkʷe* m., *vattékʷe* f. “1”, further Iraqwoid \**daba* “hand, arm” (Ehret 1980, 162; Kießling & Mous 2003, 78), Yaaku *dab* “palm of the hand” (Hobley) = *dap* “foot” (Heine).

5.5. Beja \**?ay* “5” transparently corresponds to \**?ay* “hand, arm”. There are promising cognates in SCush.: Iraqwoid \**yaaðee* “leg, foot”, Qwadza *yaðo* id., Asa *yaðata* “sandal” : Iraqw *yaðati* id. (Ehret 1980, 384; Kießling & Mous 2003, 328) on the basis of the semantic correspondence “palm of hand” ~ “sole of foot”.

**“six”**

6.1. Beja \**?asa-gwiL* “6” = “growing of 1” (see §1.1.).

6.2. Agaw \**wäl-ta* “6” = “1 plus”, cf. ECush. \**wal-/wil-* “union, together, each other” > Saho *wili*, Afar *uli* “one”, Somali *wal* “all”, Elmolo *wol* “together”, Oromo *wol(-i)* “together, with”, Sidamo *wole* “other”, Burji *wólli* “each other” etc. (Sasse 1982, 188–89).

6.3. ECush. \*(*?ha*)*lih-* “6” and SCush. \**lahooðu* “6” = “1+5” or “other 5”: \*(*Ha*)*lih-* < \**?/halih-* *hVn-* or \**-xubin-* “1 + 5” – see §1.2.

6.3. Dullay \**tabbi[n]* < \**tak-xubin-* “1+5”, perhaps also Qwadza (SCush.) *típa* “6” (Claus) – see §1.3.

**“seven”**

7.1. Agaw \**läyä-/layä-tta* and HECush. \**lamala* “7” are transparent derivatives of the numeral “2”, expressing “2 plus”. It is natural to expect analogous structures in other forms of this numeral:

7.2. Beja \**?asa-Lamaa* “7” probably expresses “growing of 2” – see §2.1.

7.3. Afar-Saho \**mal(V)-hVn-* “7” – §2.1.

7.4. Dullay \**tahhan* ~ \**tamman* “7”, if it reflects \**tamħan* < \**tlam-ħan-* or \**xubin-* – see §2.1.

7.5. The most enigmatic form of the numeral “7” remains LECush. \**tizzuba-* “7”. With respect to Arbore *tazbudda* “7” mediated by Conti Rossini it is possible to derive \**tizzuba-* from \**tizduba-* < \**tizbu(d)da-*. None of these protoforms are analyzable within Cushitic, but \**tizbu(d)da-* at least resembles a compound of the numerals “3” + “4” in the Mao branch of North Omotic: \**t/siyazi* “3” + \**(m)betṣi* “4”, or Gonga \**?awudda* “4”, continuing from Omotic \**?awurda* “4” which corresponds to Beja \**fardig* and ECush. \**?afwar-/?afur-* “4” (see §4.1.). The internal structure “7” = “3+4” or “4+3” is unknown in Cushitic and Omotic, but well-attested in Chadic: (West) Gerka *praukum* “7” = *prau* “4” + *kun* “3”; Polči *woosər-myeen* “7” = *woopsə* “4” + *myeen* “3”

|| (East) Kujarke (Doornbos) *angofadagobo* ~ *gafadagubo* “7” = *fada* “4” + *ubo* “3”; Ndam (Decorse) *wo subo* “7” = *woro* “4” + *supu* “3”. In NS e.g. in the West Nilotc language Jumjum: *ngūnguk* “7” = *ngūn* “4” + *dūk* “3”.

7.6. Iraqwoid \**faanqu* and Qwadza (Claus) *tipafáñku* “7” (where *típa* = “6”) are probably of Bantu origin, where the forms as Šambala *mufungate*, Tabwa, Konde *fungate* “7” are explainable as \**funga* & \**ntatu* “bound 3 {fingers}” (Schmidl 1915, 172). There are remarkable parallels in CChad.: Fali Wuba *birfuy*, Fali Gili *mburufuy*, Fali Jilbu *mburfiy* “7” (Kraft) etc., perhaps also of Bantu/Bantoid origin.

### “eight”

8.1. Beja \**?asa-mhay* and Agaw \**säy"ä-tta* “8” are transparent formations expressing “growing of 3” and “3 over {5}” respectively, differing only in the order of their components.

8.2. ECush. \**šiz/hjent-* “8” probably follows the same pattern, if it is analyzable as ECush. \**šiz-h-* “3” (§3.3.) + HECush. \**?omut-* “5” (§5.3), cf. Haberland & Lamberti 1988, 136–37.

8.3. Afar-Saho \**bahaar* “8” is probably explainable as a borrowing of Tigrinya *bəhär*, *bāhär* “big, strong”, Tigre *baharat* “sprouting” (LH 267). Bilin *bahaar*, pl. *bahalil* “big, great” is of the same origin.

8.4. Dirayta (Jensen apud Moreno) *lakkusedda* “8” is analyzable as Konsoid \**lakki* < \**lamki* “2” and Oromo *sadii* or Dasaneč *seddī* “3”, hence “second three”? Could Qwadza *lakádu* “8” be of the same origin?

8.5. Iraqwoid \**dakati* “8” resembles the West Nilotc numeral “8”: Šilluk *abi-dek*, Lango *wu-adek*, Nuer *be-dek* “8” vs. Šilluk, Lango *adek*, Dinka *dyak* etc. “3”; the West Nilotc origin of the Bari (East Nilotc) numerals “6” – “9”, including *budök* “8”, is also very probable. Qwadza *lakádu* “8” may, but need not, be of the same origin.

### “nine”

9.1. Beja \**?as-fadig* “9” is a transparent compound “growing of 4”. Similarly Agaw \**säz-ta* “9” = “4 over”. Its more archaic form \**säxyata* was borrowed into Ethio-Semitic: Harari *zəħtāñ*, Argobba *zāħtāñ*, Amhara *zäjtāñ*, Gurage of Silte *ziṭṭəññə*, Inor *ȝiʔə* etc. “9” which were probably a source of borrowing for this numeral in Dirayta (Konsoid/ECush.) *tsinqoota* and Zayse (Ometo/ONom.) *tsingō* “9” – see §4.2.

9.2. ECush. \**sagal(an)-* “9”, besides Dullay \**gollan-* “9” || SCush.: Iraqwoid \**gwaleeli*, Qwadza *gweli* “9”, probably represent the subtractive formation \*“[10] minus 1” based on Cush. \**gwal-* “1” (see §1.1.).

9.3. HECush. \**honso* “9” remains enigmatic, perhaps a compound of \**šalah-* “4” + \**?omut-* “5” > \**Hont-* + \*-sV as in Alaba *tønnsú* “10”.

### “ten”

10.1. Beja \**tamin* “10” (by Reinisch also *tamín*) || Agaw \*-*täjən* “-ty” (formant of tens) || ECush. \**tomman-* “10” || Om.: Ometo \**tamma*, but Čara *tansa* | Gimira \**tam* | Dizoid \**tammu* | Gonga \**taNsa* || Aroid \**tamma* “10” represent a Cushitic-Omotic isogloss (or a Cushitic loan in Omotic) with suggestive counterparts in NS: Nilotc (South) \**taman* | (East) \**tɔmɔn* (without Bari) | (West) Lango (Conti Rossini) *tomon* “10” (isolated within WNilotc) || SESurma (Haberland): Yidenit *tómmo*, Meqen *tommon*, Bodi *tómmo(na)*, Mursi (*a*)*tómmon* || Kuliak: Ik *tomin* || Nubian: Nobiiñ *dimé*, Kenzi *dimin*, Haraza *timinah*, Birgid *tummun*, Meidob *tmizi* || Bertha: Fadashi & Mayu (TB) *ma-thuma*, Fazoglo (Tutschek) *ma-domā* || Saharan: Zagħawa (MacMichael) *timm(i)*, all “10”, besides the compounded forms attested in Koman: Fungi (MacMichael) *diman-didin* “9” = “10 – 1”, cf. *didian* “1”, Gule (Seligmann) *dēmadidin* “9” : *dēdin* “1”. The Nilotc, Surmic and

Kuliak forms are probable Cushitic loans with respect to presence of other Cushitic borrowings in these branches, including numerals. Koman and Bertha languages also are in contact with the Cushitic languages. In last two centuries the Nubian languages were at least partially (Nile Nubian) in direct contact with Beja, but earlier probably with other Cushitic branches too (Bechhaus-Gerst). The Nubian forms are derivable from two variants: \**timin* & \**tummun*, with regard to regressive assimilation \**tam(m)in* & \**tammun*, both forms attested in Beja dialects. The Zagħawa counterpart *timm(i)* could be mediated by Meidob.

10.2. Agaw \**czka* “10” originated perhaps via palatalization from \**təka* with respect to Kunfäl *teka* “10”. This protoform resembles the East Cushitic numeral \**tak-* “1” (see §1.5.). In this case it is logical to propose an original syntagm \**təka-täŋən* “1 x 10”, where the second component was eliminated thereafter the first member had lost its independent singular meaning.

10.3. Oromoid \**kuđan*/\**kurn-* “10”, besides Oromo *kurnaffa* “10th”, Dullay \**kuddan* “10” perhaps reflect a hypothetical protoform \**kurđan-*. Forms without final \*-an- are probably related: Ma'a *ixadu* (Ehret / Elderkin) = *χadż* (Meinhof) “10”, *mīxadu gānā* “100” and Rendille *kūd* / *kūqō*: “100”, Dasaneč *kōt tīgīdī* “100” (*tīgīdī* = “1”). Although the internal structure remains dark (singulative or diminutive role of \*-an-?), there are promising parallels in Chadic: (West) Daffo-Butura *hūryè*, Bokkos *hūrè* “10” || (Central) Mofu *kūráw*, Zulgo *káró*, Gisiga *kírú*, Baldamu *kúrú*, Muzgum *gúru* “10” || (East) Sumray *kooar*, Tumak *koar*, Ndam *ankwar*, Miltu *kwar*, Nancere *góra*, Mubi *kúrúk*, Kera *hór*, Barain *kur*, Jegu *ʔorök*, Birgid *ʔorok* etc. “10”.

10.3. Yaaku *qapon* “10” is enigmatic.

10.4. Iraqwoid \**mibaangw* and Qwadza *mibi* “10” are enigmatic.

### “hundred”

100.1. Beja \**šee* “100” was borrowed from Coptic Sahidic & Bohairic *yye*, Fayyumić *yyη* “100” < Egyptian *š(n)t /ši(nju)t/* (Loprieno).

100.2. Agaw \**liy* ~ \**lay*.

100.3. ECush. (Afar-Saho & Somaloid) \**bogol-* id. Borrowed into Om.: Gimira \**bal* | Dizoid: Nayi *balla* | Gonga \**balla*. It also appears in Ethio-Semitic: Soddo, Zway *bäqəl*, Masqan, Selti, Gogot *bäqqəl*, Chaha, Ezha, Gyeto *bäqər*, Ennemor, Endegeñ *bäðär*; Harari, Gafat *bäqlä*. Could it be connected with Geez *bäqʷälä* “to germinate, flourish”, Arabic *baqala* “to sprout” etc. (Leslau 1979, 147)?

100.4. ECush.: Rendille *kūd* / *kūqō*: & Dasaneč *kōt tīgīdī* “100” (*tīgīdī* = “1”) may be related with Oromoid \**kuđan*/\**kurn-* “10”, Dullay \**kuddan* “10”. Forms without final \*-an- are probably related: Ma'a *ixadu* (Ehret / Elderkin) = *χadż* (Meinhof) “10”, *mīxadu gānā* “100”.

100.5. ECush. (Oromid-Dullay-HECush.) \**dibba* “100”.

100.6. Dirayta (Mirjami Uusitalo) *tseeta* = (Tanaba, Cheru & Wedekind 1994, 11) *teet*, Muusiye *seeta* “100”. Could it be related to Iraqwoid \**tsiiru* “100”?

### “thousand”

1000.1. ECush. \**kuma* || Iraqwoid \**kuma* id. ECush. > Om.: Yemsa *ʔrl'sa<sup>1</sup> k<sup>b</sup>v<sup>2</sup>ma<sup>2</sup>* “1 x 1000” | Dizoid: Nayi *wuma* | Gonga \**kuma*; EthSem.: Wolane *kəm*, Selti *kim*, Chaha, Ezha, Muher *xʷəm*, Gyeto *xūm*, Ennemor *xū*; Harari *kum* id. (Leslau 1979, 343). Reinisch (1902, 243) connected it with Arabic *kūm* “heap”.

1000.2. Agaw \**šax-i* with Ethio-Semitic counterparts as Tigrinya *šəh*, OAmh. *ših*, Amh. *ši* “1000” may be connected with Beja *šee* “100” (Appleyard 2006, 137).

## East Cushitic influence on the Surmic and Nilotc numerals

Southeast & Southwest Surmic numeral 2 and Southeast Surmic numerals 3, 5–10, plus Kwegu 4, are apparently of East Cushitic origin. In East Cushitic the closest counterparts appear in Galaboid. Heine, Rottland & Vossen (1979, 82) tried to explain the similarities between South Nilotc and East Cushitic numerals 6–10, 30, 40, 50, 100, assuming an absorption of a hypothetical Omo-Tana population by Southern Nilotes. They designated this hypothetical community *Baz* according to the name of the Lake Turkana. The East Nilotc (especially Maa) counterparts should have been transmitted via Southern Nilotc (*ibid.*, p. 85), but the Southeast Surmic mediation is more probable from the point of view of both phonetics and linguistic geography.

	Surma		South Nilotc (Rottland)		East Nilotc	East Cushitic

## East Cushitic influence on the Ongota numerals

The Ongota numerals 2–9 and 100 are apparently of East Cushitic, probably Dullay, origin.

	Ongota (Fl)	Tsamay	other Dullay (AMS)	other parallels
1	<i>akala</i> (á)kalbano	dóoko	Hrs <i>toðo</i> , Go <i>tóðo</i>	Aroid: Dime <i>wɔkʰal</i> , Kara <i>kallà</i> , Banna <i>kɔla</i> NS: WNil.: Shil <i>ak̥el</i> , Nu <i>k̥e:l</i>    CSud: Yulu <i>kala</i>
2	<i>lama</i>	<i>lakkí</i>	Dob <i>lammay</i> , but Hrs, Go, Ga <i>lákki</i>	Aroid: Hamer, Kara <i>lama</i> , Banna <i>lamma</i> ; Nom.: Male <i>lam?</i> , Koyra <i>lam<sup>e</sup></i>
3	<i>zéha / zexa</i>	<i>zeeh</i>	Hrs <i>ezzah</i> , Go <i>izzéh</i>	ECu * <i>s/š-z-h-</i> (Sasse 1976, 138f)
4	<i>talaxa / talaha</i>	<i>sála</i>	Hrs, Go <i>sala</i>	HECush.: Si, Gedeo <i>šoole</i> , Kmb <i>šolo</i>   Dah <i>saʃála</i> NS: Kunama <i>sàllè</i>    Maban: Maba <i>asaal</i> ; Kibet <i>àttál</i>
5	<i>hobbe / hoppe</i>	xóobin	Hrs <i>xupin</i> , Go <i>hupin</i>	Yaaku <i>xooipi</i>
6	<i>ts/ṣanafa &lt; *tsafana ?</i>	tábbén	Hrs <i>cappi</i> , Go <i>tappí</i>	
7	<i>taxanke</i>	táhhan	Hrs <i>cahhān</i> , Go <i>taħħa</i>	
8	<i>ʔiusta / ísta</i>	sézzen	Go <i>sétte</i> , Hrs <i>sasse</i>	Kmb <i>hezzeto</i> , Burji <i>hiditto</i> < * <i>hiszeet-</i> < * <i>sizheet-</i>
9	<i>gólanke</i>	góllan	Hrs <i>kollan</i> , Go <i>kolla</i>	SCush.: Iraqw <i>gʷalel</i> , Qwadza <i>gweli</i> “9”, cf. Beja <i>gaal</i> “1”   ECush.: Arb. <i>gʷalaata</i> “other”
10	<i>coma</i>	kúykkó	Hrs <i>húddan</i> , Ga <i>xiúḍda</i>	? NS: Gumuz: Sai <i>gicuma</i> “20”
100	<i>diba</i>	<i>dibaba'ee</i>	Hrs, Go <i>dippá</i>	ECu: Or. <i>dibba</i> , Ko. <i>dippa</i> , Si. <i>tibbe</i> , Burji <i>çibba</i>
